

Forth Estuary, Scotland

## Monitoring of Marine Mammals: PAM and PamGuard Software

*Ron McHugh*

*Ocean Systems Laboratory*

*Electrical Electronic and Computer Engineering*

*School of Engineering and Physical Sciences*

*Heriot-Watt University*

*Edinburgh*

## (a) Monitoring of Marine Mammals for Research and Mitigation

Visual versus passive acoustic  
PAM for operational Mitigation and Research

## (b) PamGuard software

Where did it evolve from?

What does it do?

The Technical bit: Introduction to the software infrastructure

“Open-source” so how do I get PamGuard?

The future?

The PamGuard Team and acknowledgements

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Marine mammal studies are traditionally done visually*

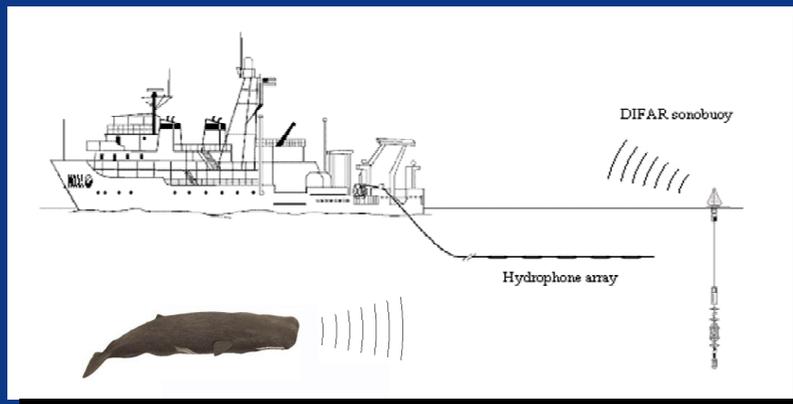

- *Cetaceans are hard to spot even in the best conditions*
- *Some spend long periods submerged*
- *Need to monitor day & night*

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Acoustic monitoring methods are now becoming common*

- *From a ship using a towed array or sonobuoy*
- *From fixed hydrophones – either cabled or autonomous*

*Detection of marine mammal vocalisations*

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Acoustic monitoring methods are now becoming common*

### *Advantages*

- *Monitor 24 hours a day in poor visibility*
- *Acoustic detection distance can be  $\geq$  than visual range*
- *Acoustic detection can be less tiring and onerous*
- *Permanent record & auditable*

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Acoustic monitoring methods are now becoming common*

### Advantages

- *Monitor 24 hours a day in poor visibility*
- *Acoustic detection distance can be  $\geq$  than visual range*
- *Acoustic detection can be less tiring and onerous*
- *Permanent record & auditable*

### Disadvantages

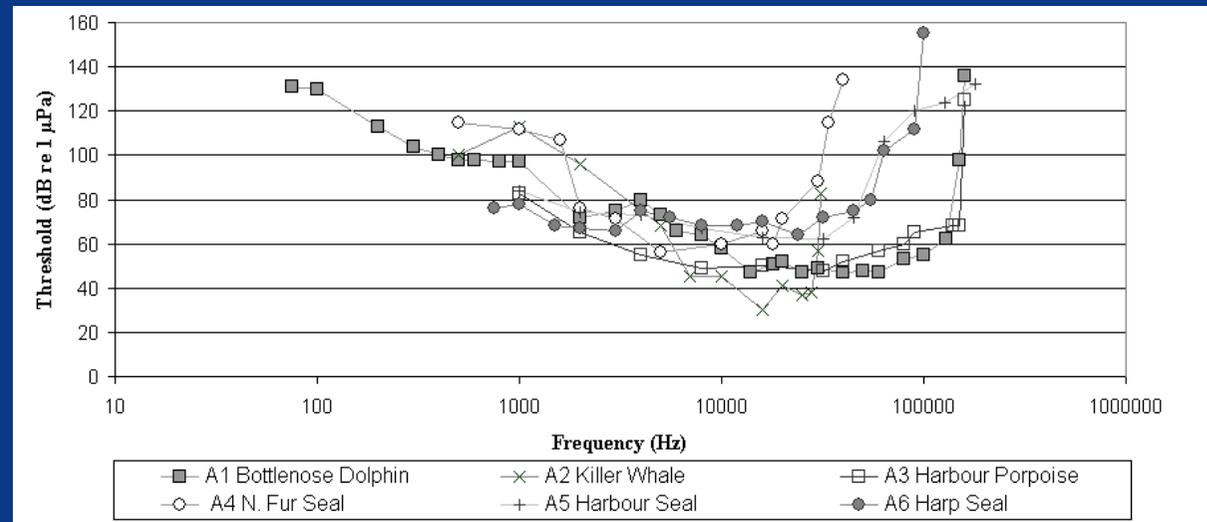

- *Some species rarely vocalise*
- *Noisy vessels can mask vocalisations/ affect range capability*
- *Anthropogenic noise may affect vocal behaviour*
- *Array limitations including ambiguities and accuracy issues*

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Cetaceans come in all sizes & make a broad range of vocalisations*

- *Have to cover a variety of wide frequency ranges*
- *Click*
- *Tonal*

*Marine mammal auditory thresholds (J Gordon)*

## (a) Monitoring of Marine Mammals for Research and Mitigation

### *PAM for survey and strategic mitigation*

- *Presence/ absence — need a knowledge of species vocalisation types & behaviour*
- *Index of abundance — need to understand detection probabilities*
- *Density and abundance — detection probability a function of range*
- *Consistent detection probability most important*

## (a) Monitoring of Marine Mammals for Research and Mitigation

### *Mitigation practices*

*Regulatory requirements vary between geographic areas*

- *adopt a precautionary approach*
- *very species dependant*

### *Generic mitigation measures*

- *soft - start or ramp-up source firing procedure*
- *exclusion or warning zones*
- *continual monitoring*

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Mitigation monitoring – an ideal system (seismic air-gun example)*

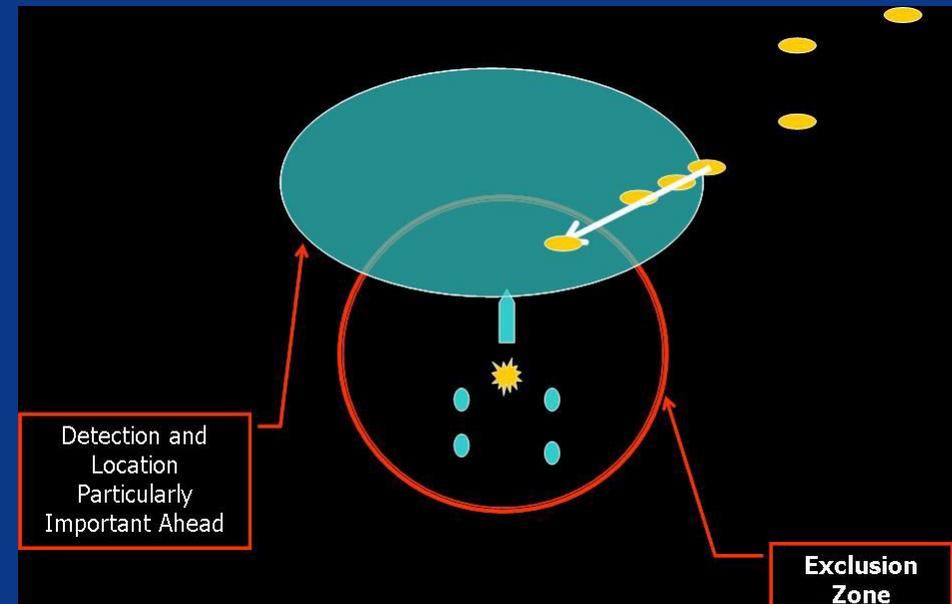

*Aim –to reduce the risk of animal exposure to sound.*

*Continue for the duration of the operation*

*Location accuracy vitally important*

*Quantification and real-time prediction of detection efficiency is really important*

*Real time – detection/localisation*

*Main vessel/Guard vessel ?*

## (a) Monitoring of Marine Mammals for Research and Mitigation

*Standards, standards, standards.....*

- *We need to have a consistent PAM performance*
- *Common reporting methods*
- *Regulators need to support PAM (or not) and be aware of its limitations*
- *PAM is a total system / PamGuard is a software package / PAM is only as good as the array to which it is attached*
- *Without standards will PAM ever really be a credible tool?*

(b) PamGuard software: Where did it evolve from?

*There are of course a number of existing PAM software packages available (some of these are free)*

*For example:*

*IFAW suite*

*Ishmael*

*Cornell Labs (Raven) .... Military (MMADS) ..... etc*

*PamGuard can be thought of as a fusion of IFAW suite and Ishmael as it has all the key functionalities of these two software packages*

## (b) PamGuard software: What does it do?

### *IFAW\**

*Click detectors (medium/high frequency)*

*Tonal (whistle) detectors*

*Interface/detection log/annotation/GPS*

*Calculates bearing/maps*

### *Ishmael\**

*Spectrogram viewer*

*Multi-element localisation methods*

*Automatic generic call detection/energy*

*summation/matched*

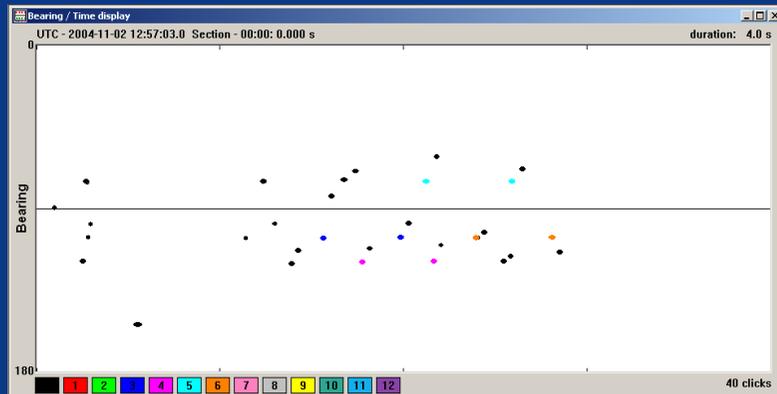

*filter/spectrogram correlation*

*log file annotation*

*\* and many more functions*

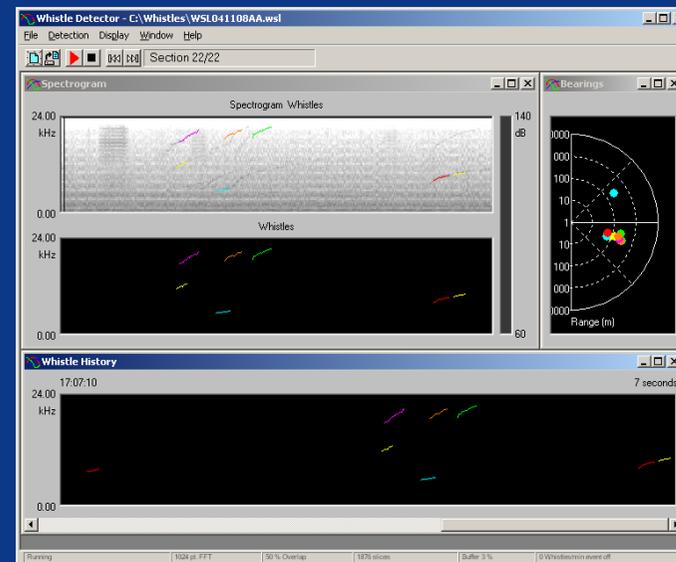

## (b) PamGuard software: Like IFAW

### *RainbowClick time-bearing*

*The vertical position of an eclipse corresponds to an ambiguous bearing, horizontal position relates to time click was received.*

*Width and height of the "eclipse" is proportional to the duration and amplitude of the click.*

### *Whistle user interface*

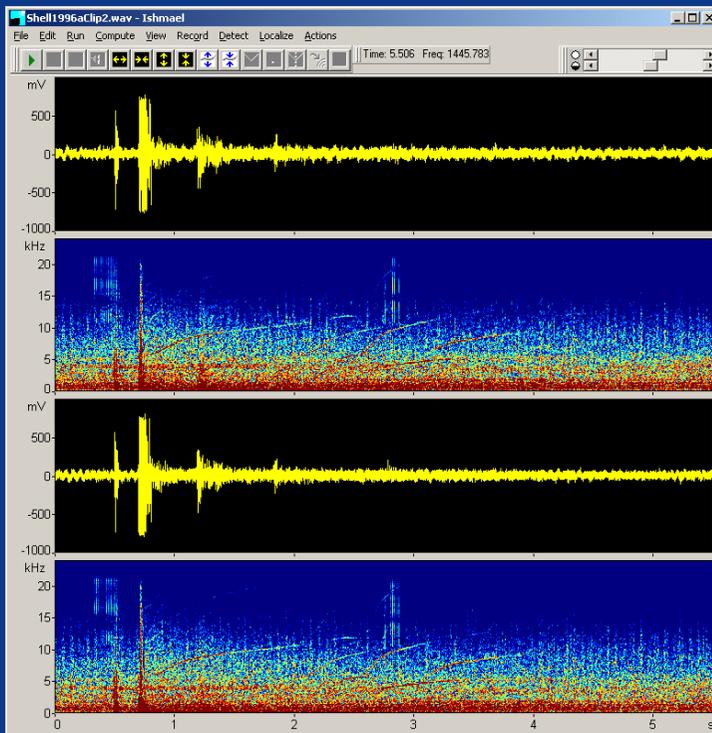

*Rolling spectrogram display which overlays each detected whistle in distinct colours to aid viewing.*

*Real-time detection and analysis for tonal sounds*

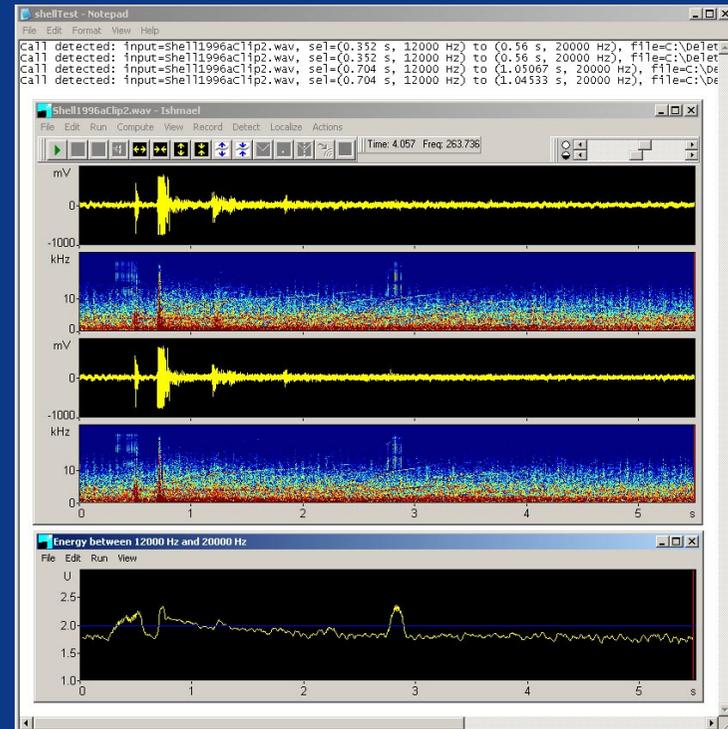

## (b) PamGuard software: Like Ishmael

*Time series & spectrogram*

*Energy detection option & automatic call logging*

(b) PamGuard software: it is also free!

From the onset it was agreed that PAMGUARD would be a freely available, platform independent, open source project

This would:

- Ensure its long-term viability
- Encourage its acceptance as the new “standard” within the research and commercial communities
- Foster a community of programmers to contribute to the code
- Cross platform compatibility is achieved through the choice of Java as the programming language
- Open source through project’s presence on SourceForge

## (b) PamGuard software: The technical bit!

### *Built in modules*

Array Configuration

Model manager and profiler

GUI Container for plug ins (handles graphic displays, menus, help, etc).

Help manager

Configuration and settings manager

Standard graphics layout classes for plots, axes, colour themes, etc.

## (b) PamGuard software: The technical bit!

### *Plug in modules*

Map          NMEA / GPS Acquisition

Acquisition (sound cards, NI cards, files)

FFT (Spectrogram) Factories

Decimator          Sound Recording (can also do clip generation)

Spectrogram Smoothing

Spectrogram and 'Radar' Displays

Click Detector          Whistle Detector

AIS Acquisition          Ishmael Interface

Ishmael Detectors          Database Storage

User Documentation

### *Built in modules*

Array Configuration

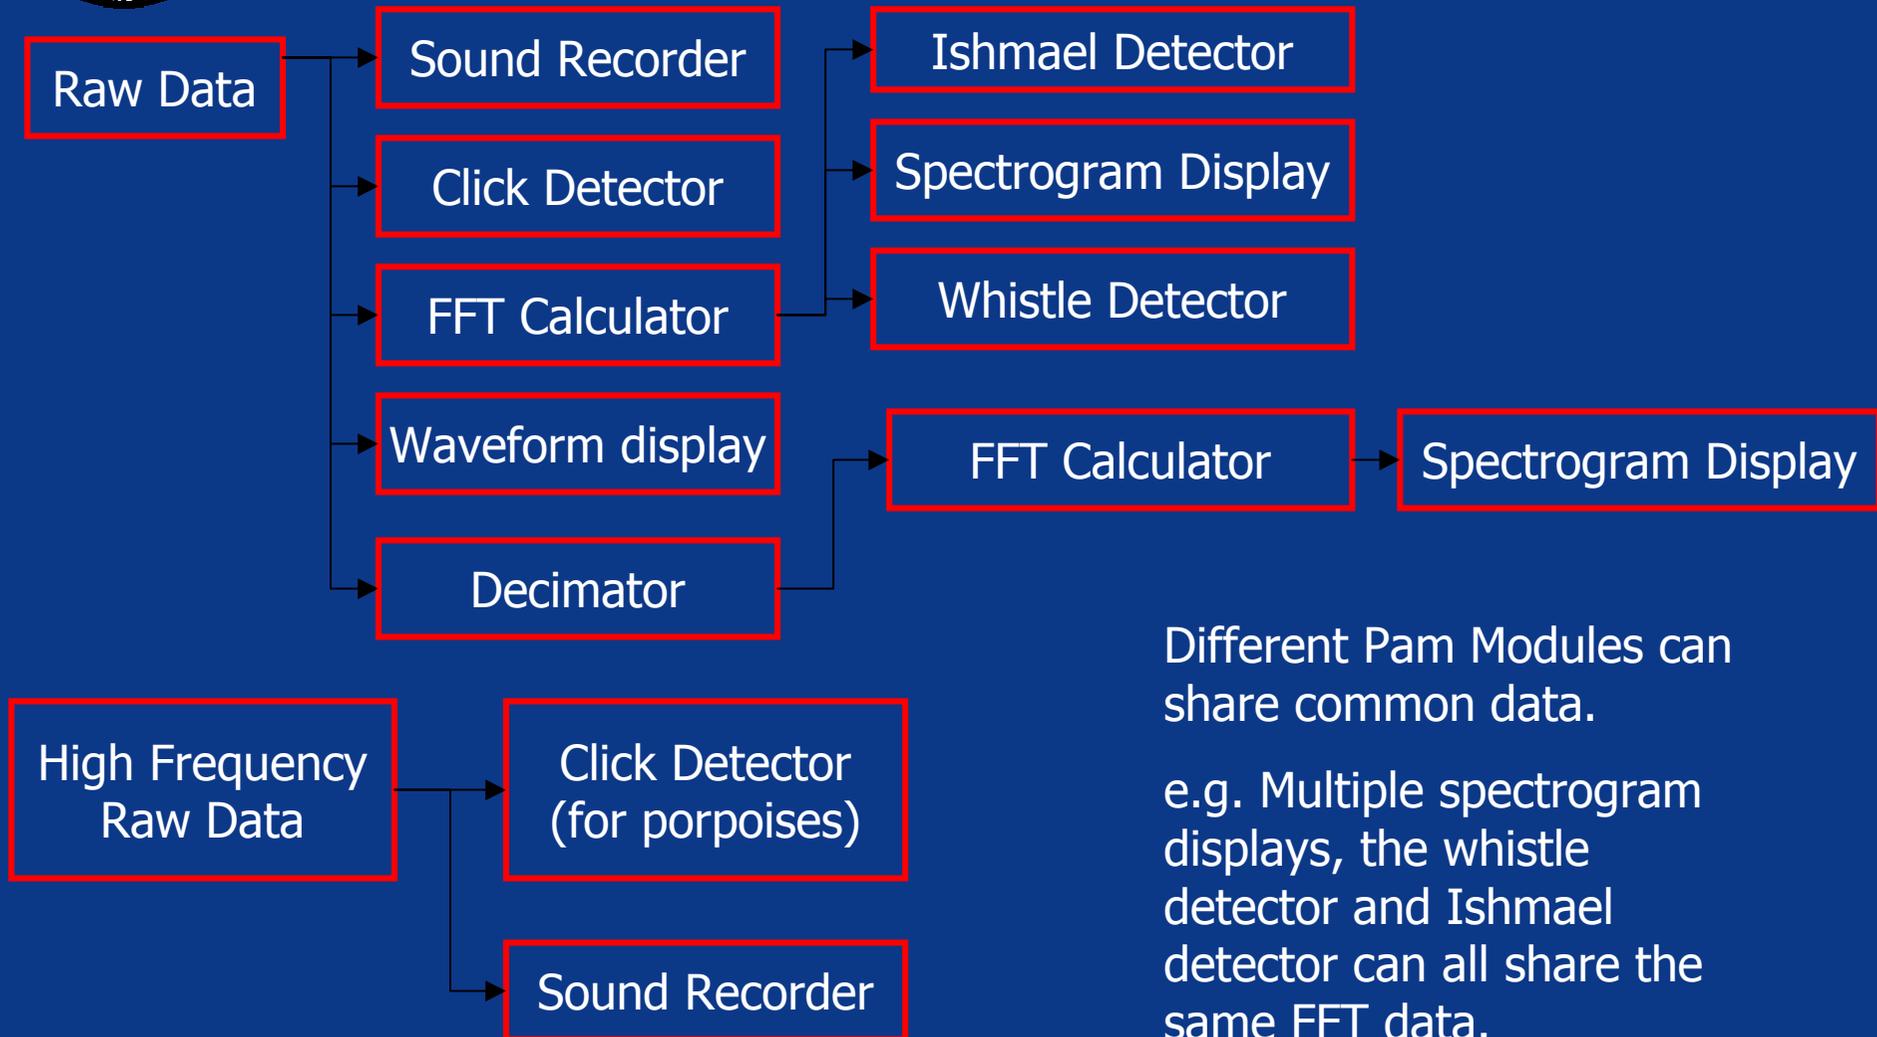

Model manager and profiler

GUI Container for plug ins (handles graphic displays, menus, help, etc).

Help manager

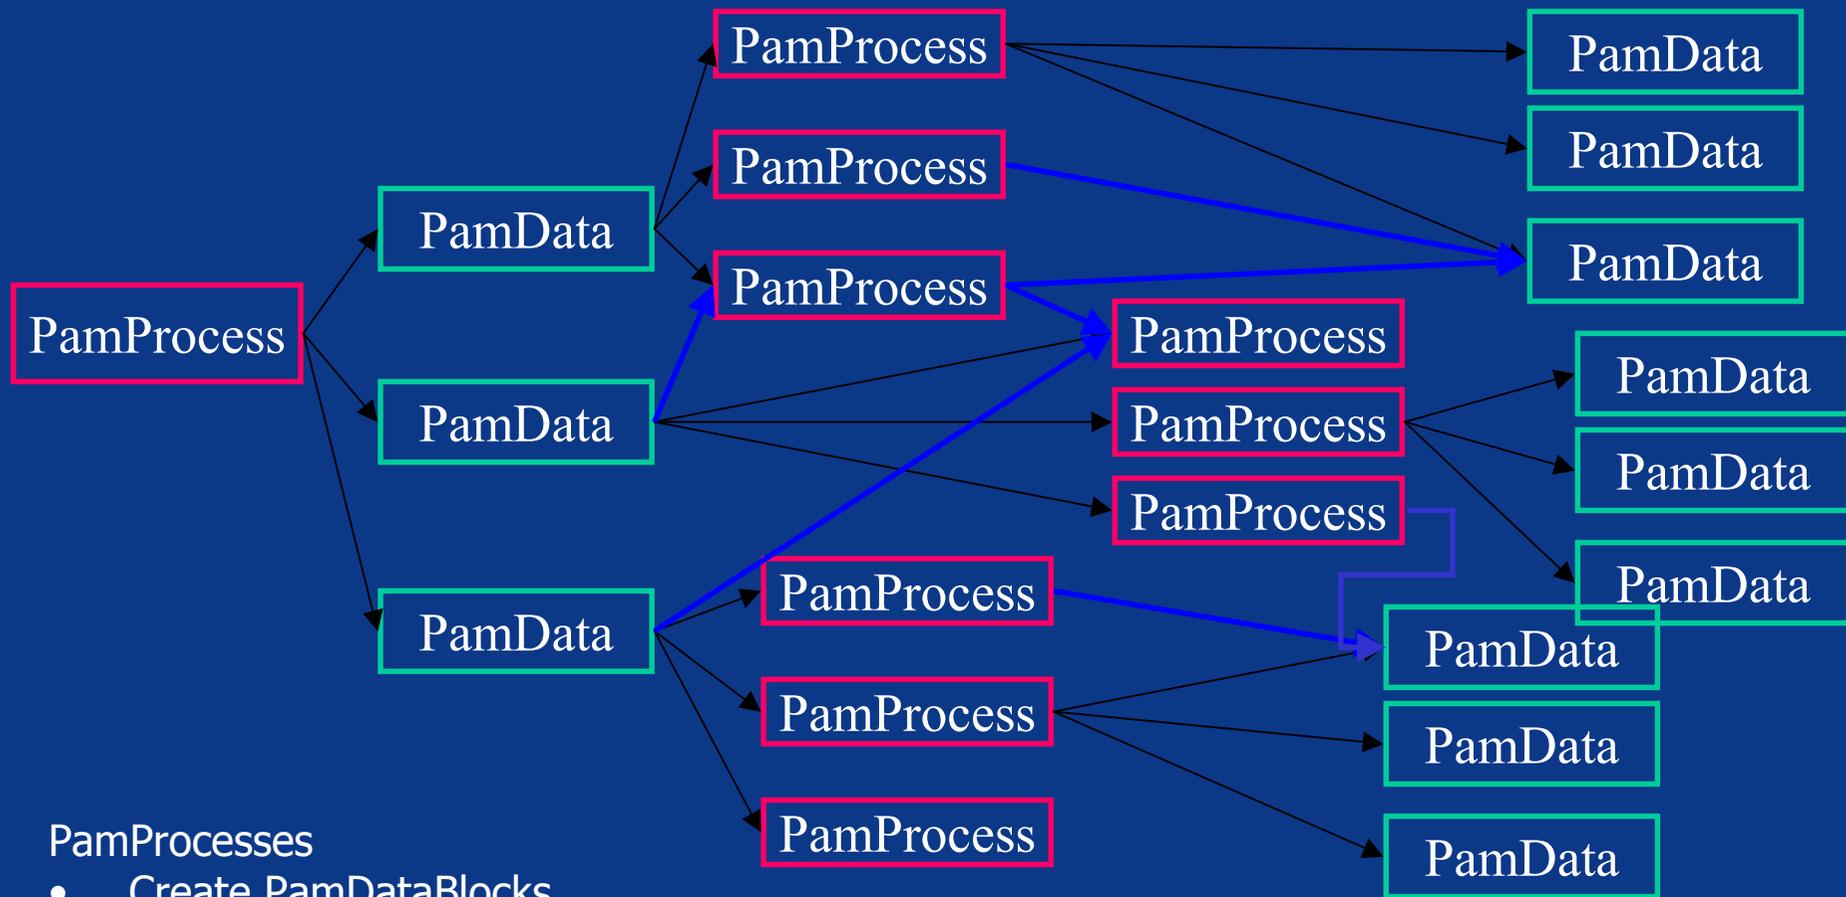

Configuration and settings manager

Standard graphics layout classes for plots, axes, colour themes, etc.

Different Pam Modules can share common data.

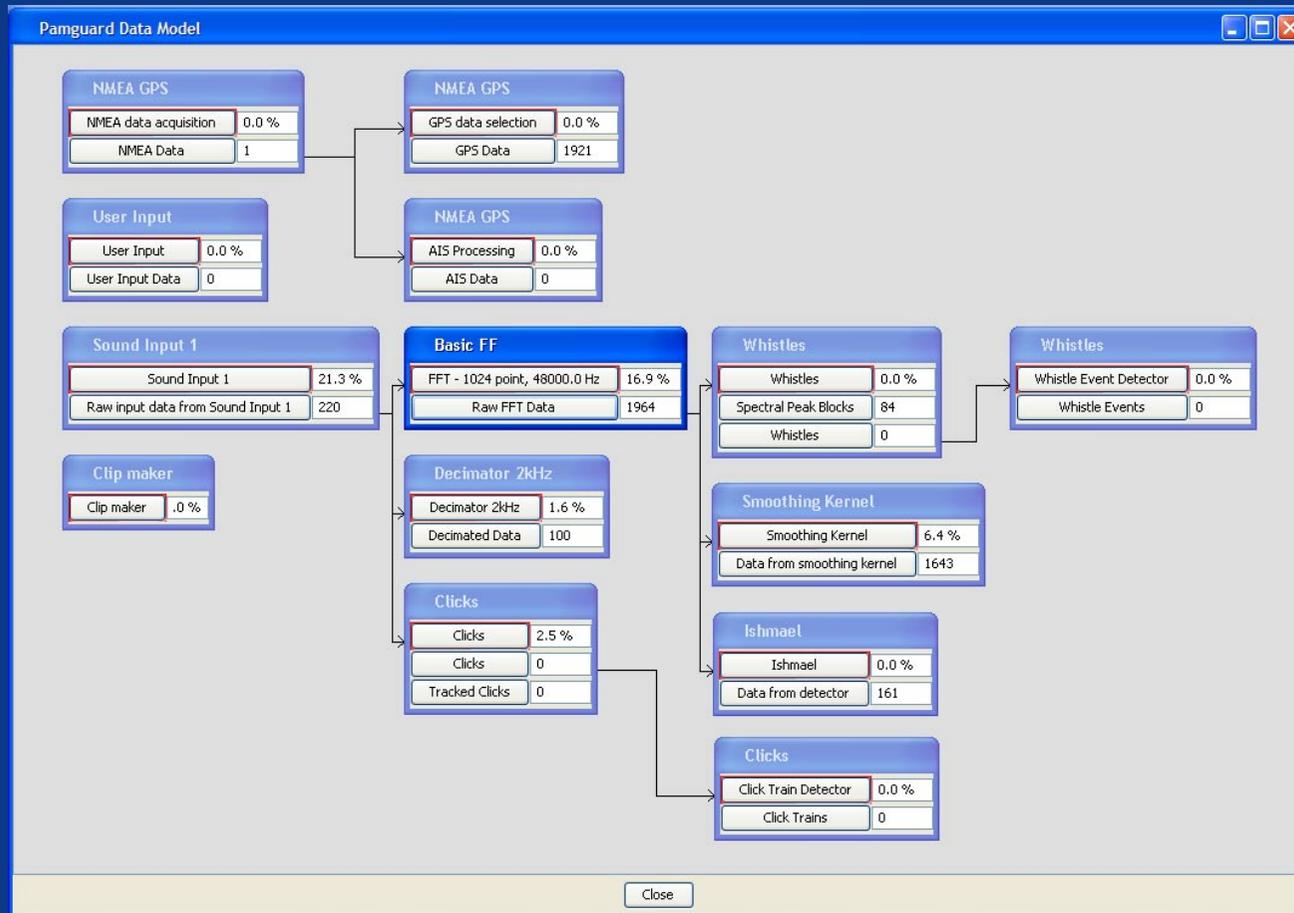

e.g. Multiple spectrogram displays, the whistle detector and Ishmael detector can all share the same FFT data.

PamProcesses

- Create PamDataBlocks
- Subscribe to PamDataBlocks
- Say for how long they need the data to be in memory

*GUI view of the data model – build your own PAM system*

## *PamGuard Plug-ins*

*Each plug-in (PamControlledUnit) provides a number of optional functionalities for processing, providing, and displaying data*

Pam Process	Calculates / detects
Tab Panel	Provides a main display panel
Detection menu	Provides items for the detection menu
Display menu	Provides items for the display menu
Side Panel	Provides display side panels
Output data blocks	Produces output data
Graphic overlays	Provides graphic overlays for output data
Plug in panels	Provides plug-in graphics for output data

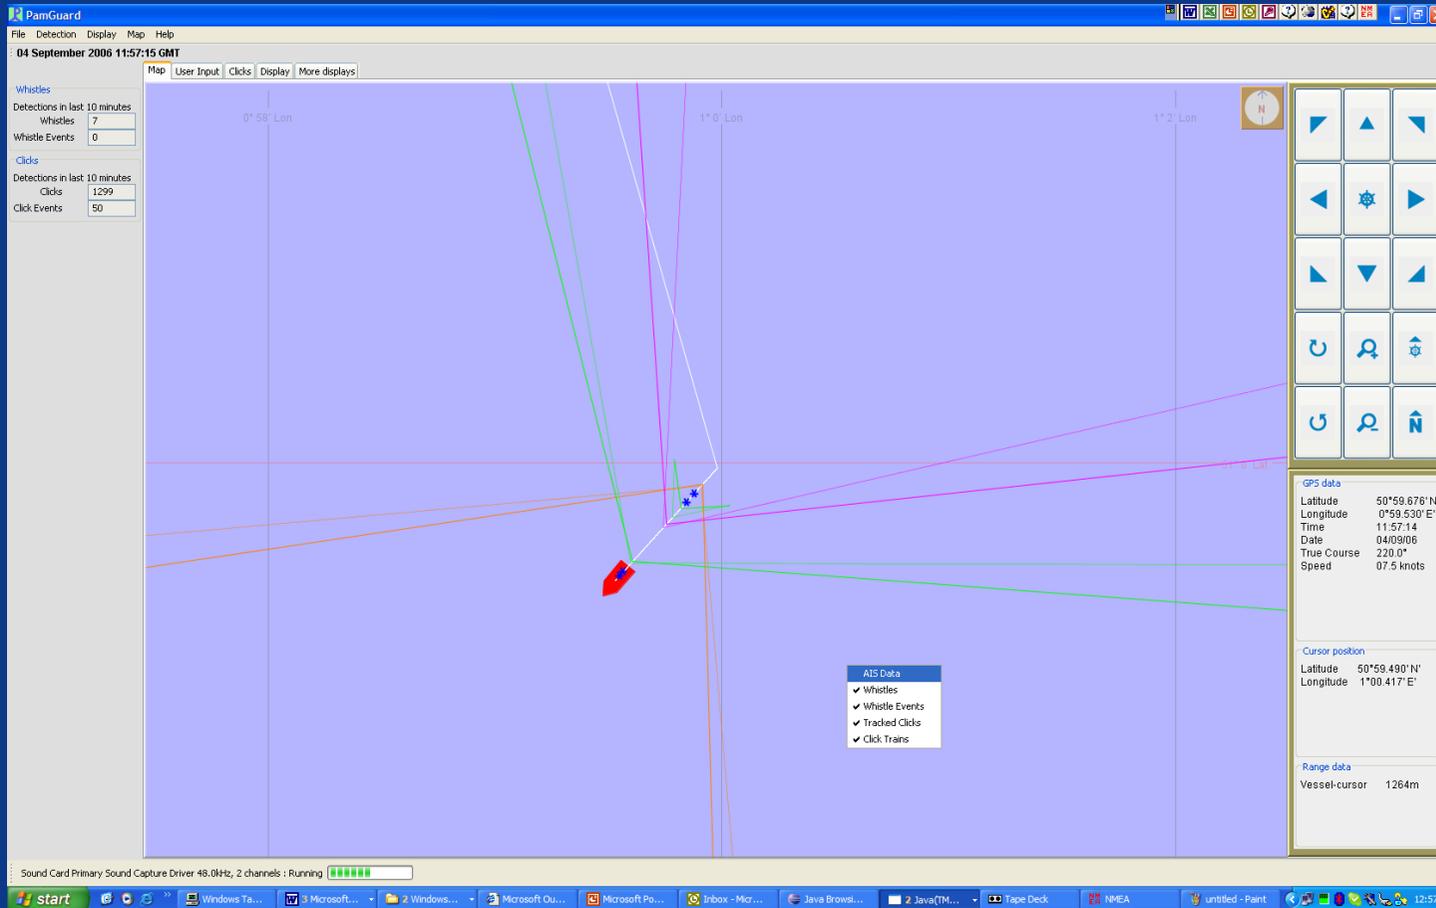

## PamGuard Plug-ins

		Map	NMEA / GPS	Sound Input	FFT Processing	Decimator	Smoothing Sound Recorder	Spectrogram Disp	Spectrogram / Radar	Click Detector	Whistle Detector	AIS Acquisition	Ishmael Interface	Ishmael Detector(s)
Pam Process	Calculates / detects		✓	✓	✓	✓	✓	✓		✓	✓	✓	✓	✓

# Hydroacoustic Research Group, Ocean Systems Laboratory

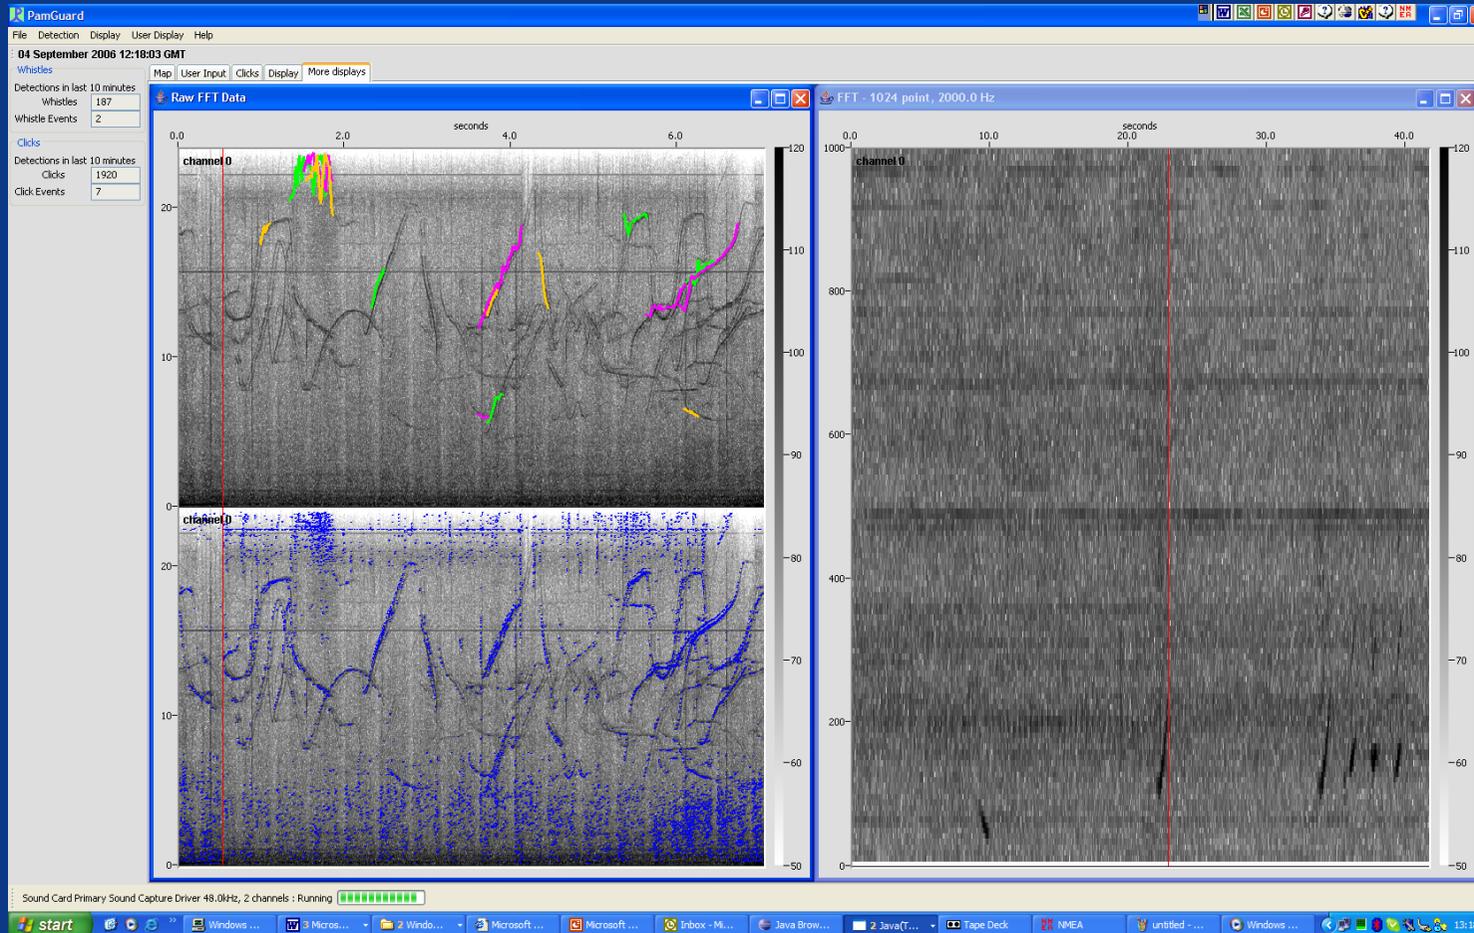

*PamGuard Map*

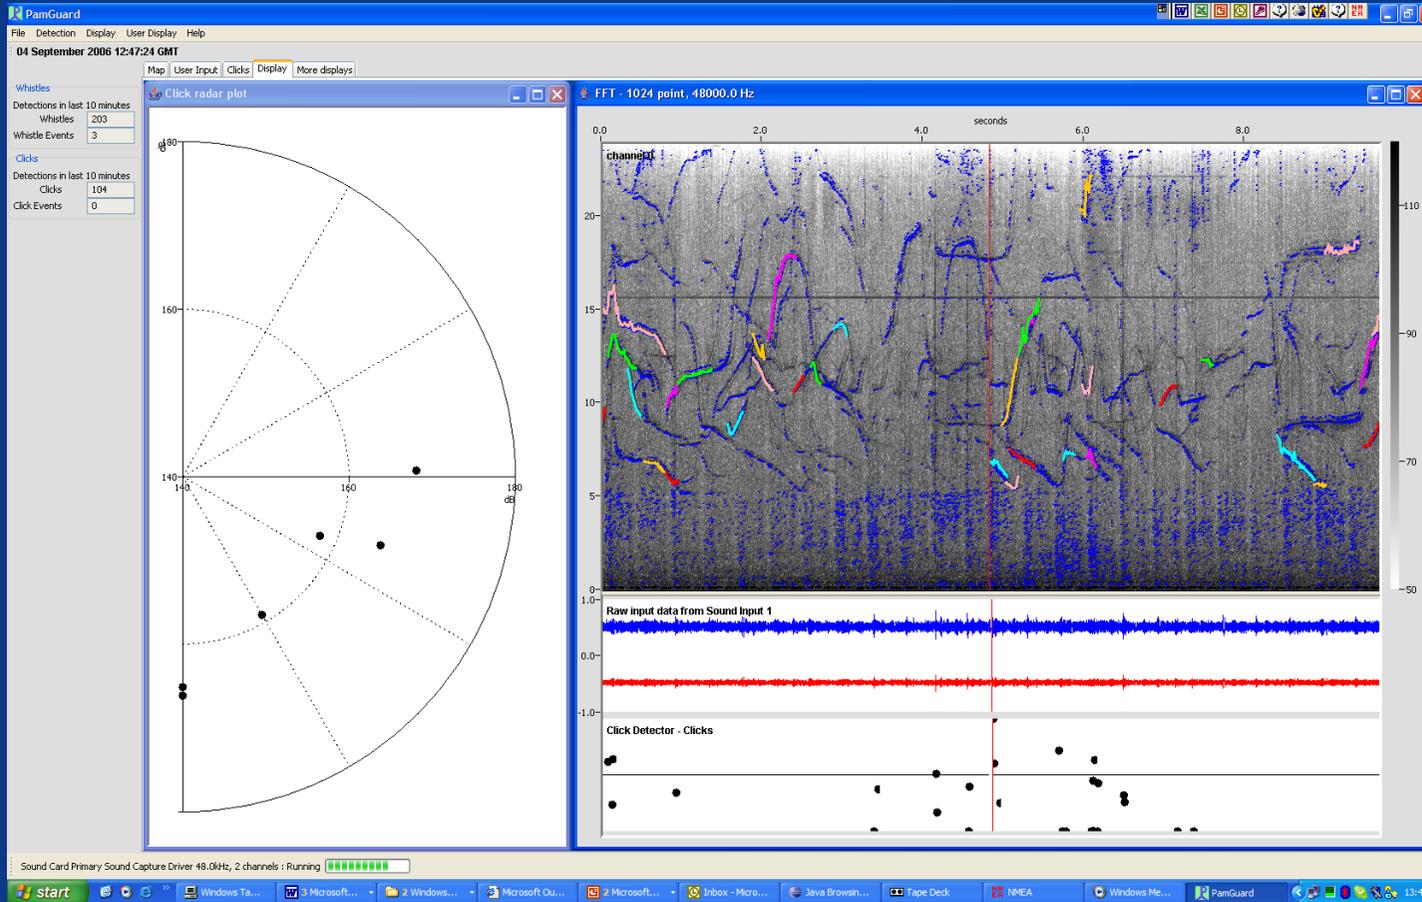

# Hydroacoustic Research Group, Ocean Systems Laboratory

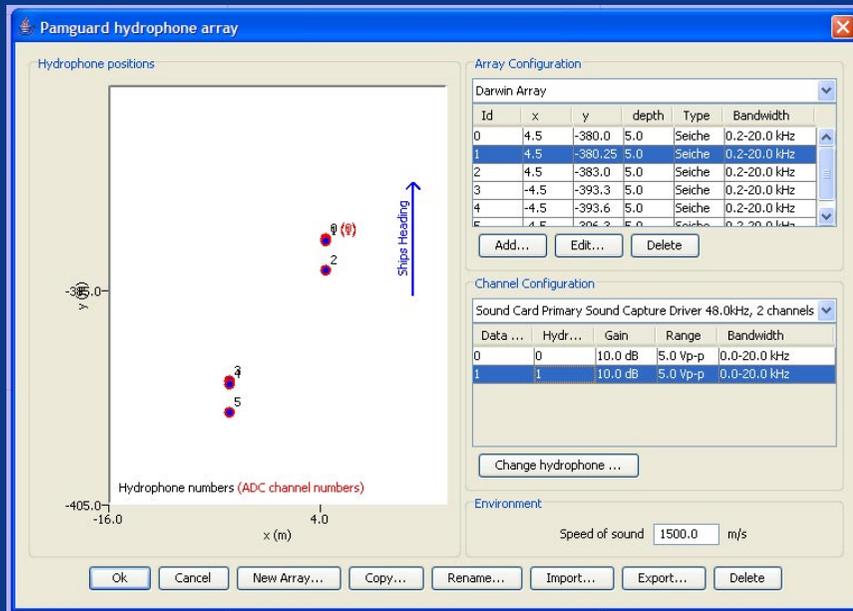

*PamGuard Spectrogram*

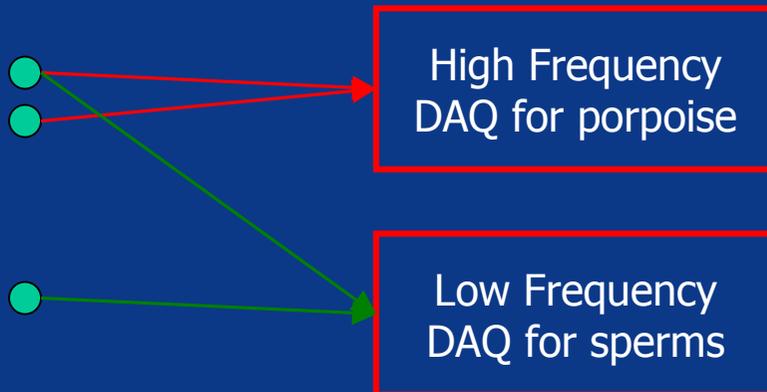

*PamGuard Radar & Spectrogram plug ins*

- Support arrays of up to 32 hydrophones
- 3-D position information can be entered manually or from sensors
- Supports one to many relationship between hydrophones and ADC channels.
- Handles calibration information
- Provides information for localisations modules
- Handles data from static hydrophone arrays.

*PamGuard array configuration set-up*

Tab panel

Information area

Channel selection

Auto Cont'+Buffer

Replicates manual buttons for quick access

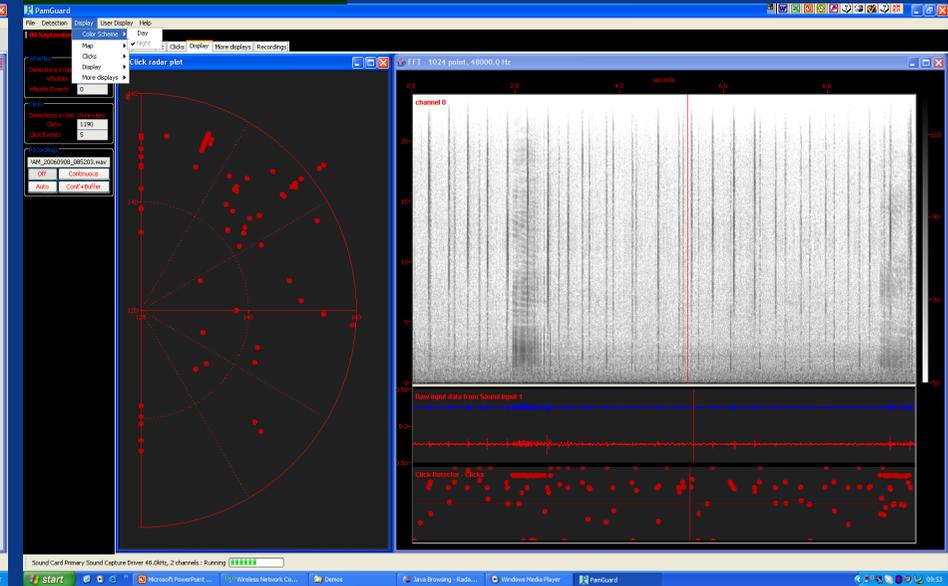

## Day view

## Night view

General classes for graphics layout, axis, etc.

*PamGuard display options*

## (b) PamGuard software: Tested at Sea under research conditions

- *RRS Charles Darwin March / April 06*
- *NOAA Delaware II: July 06*
- *Coda Survey: July 07*

(b) PamGuard software: Open Source – How do I get a copy?

*(a) Go to PamGuard website: [www.pamguard.org](http://www.pamguard.org)*

*(b) Click on the link to SourceForge*

*(c) and.....*

## (b) PamGuard software: 2008 and beyond

*(Funded by OGP JIP till the end of 2007)*

*Under discussion:*

*Guardianship: levy to be requested from industrial users based on the amount of time that PamGuard is used at sea*

*Guardian role / interface through which developers will file their software / there to ensure quality of product*

*Support: For users who may wish custom adaptations of the software*

*Consultancy role?*

## (b) PamGuard software: The Team and Acknowledgements

*PamGuard has been very much a team effort, many thanks to:*

- St Andrews University SMRU/Ecologic: Douglas Gillespie and Jonathan Gordon
- Oregon State University, USA : David Mellinger
- Scripps Institution of Oceanography, USA: Aaron Thode
- Heriot-Watt University: Phil Trinder, David McLaren & Paul Redmond

Funders:

E & P Industry since the projects conception in 2004.

2004/5: Industry Research Funders Coalition

2006: OGP Sound and Marine Life JIP ([www.soundandmarinelife.org](http://www.soundandmarinelife.org))

Hydroacoustic Research Group, Ocean Systems Laboratory

---

*That's all folks, thanks.*

K. Mullin
